```
Networking-Shit
comman mac addresses and clones:
1a1a1a1a1a1a 5a5a5a5a5a5a 001122334466 001122334400 aabbccddeeff 909090909090
004433221100 aaaaaaaaaaaa ffffffffffff 666666666666
rfkill block bluetooth / ifconfig ;
ifconfig dev down/up ;
su root ; ifconfig dev hw ether 1a:1a:1a:1a:1a:1a ;
A kernel that is under 600 MB a 200 MB one that is not
fucking bloatware Zionist Shit and is Top KEK and Anti-ADL ...
Ditching the GhostBSD because of the shitty I/O handling where Mr. Legacy BIOS BBEEEEEPPPPSSS!!!
200M or 50M ones are really the last and only option or Gentoo Non-Systemd Alts that use 200M ...
Iris Mini 32 bit Anti-SCALAR Mind Control Linux Appimage is running and I can see shit just fine now ... nothing new ...
```
